

## Object Mapper 2018 - Trial and licence key information

**A 14-day free access period is included in the Object Mapper 2018 download.** During this period, users can open any project and use Google Maps when a project has been collected with GPS co-ordinates\*.

**After the initial trial period ends,** you can only open the demo projects available on a separate download, unless a full license is purchased or an earlier version of Object Mapper is upgraded. To keep using Object mapper once the initial trial period is over please contact [sales@guidelinegeo.com](mailto:sales@guidelinegeo.com) to purchase the license key.

**The license is only available in hardware format,** a USB key (dongle) will be supplied to new customers. If you are currently an owner of a previous Object Mapper version, an upgrade of your USB key is required.

**To upgrade your USB key, insert your key into a USB port,** open up Object Mapper 2018 and go to the License Manager (under the Tools tab). In the USB Dongle section, click on “Copy to clipboard”, then open your email application and create a new email, right click and paste in the main text window of your message and 2 lines of text will appear. Email this message to your MALA contact or [support@guidelinegeo.com](mailto:support@guidelinegeo.com)

This process will need to be completed twice – once for Object Mapper 2018 and once for the Google Maps option.

The Object Mapper 2018 demo version will not interfere with any existing installed version of Object Mapper.

\*Please note regarding Google Maps! Faulty information in e-mail sent out January 30.

Google Maps is included in Object Mapper 2018 license until end of November 2018, not for the initial 12 months as stated in our previous email. We regret the misprint.
